

## Captains Log, 29 January 2019

Most of the crew has failed to renew their membership in STARFLEET, so there are very few of us now.

Fortunately, Rebecca Overstreet has returned to the ship, and I have been receiving good advice from a former member of this ship, CMDR Sean Kelly, now with the USS Columbia. Commander Overstreet reports extremely hot conditions in her part of the world, with temperatures around 114°F/46°C.

As Acting Captain, I have advanced Morgan Wable-Keene from Crewman to Mass Communications Specialist, 1st Class. Mr Wable-Keene is currently working on a Sci-Fi film project at Point Park University, in Pittsburgh, PA. He might call his captain to act as an extra for the film, currently scheduled to begin filming at the end of the month. This month, he has been working on other schoolwork, and getting props and sets ready.

I have already done a couple of streams on Rabb.it, a video streaming website. Unfortunately, nobody has attended so far, but I am uncertain whether I am setting up the stream correctly or not. Meanwhile, I am having the opposite problem to Commander Overstreet, as the temperatures where I live are ranging from 0-40°F (-18 to 5°C). Temperatures the next couple of days are predicted not to exceed 10°F (-12°C).

My goal is to get this ship up to strength (at least 10 members) by the end of the year, and therefore, the anniversary of my inheriting of the role of Captain. I am also holding a vote to

confirm my position as Captain of this vessel. I hope that I will maintain the confidence of the crew over the coming months, and hopefully, continuing well into the future.

Written by my hand, Stardate 01913.6 (29 January 2019), Commander Matthew Barclay,  
Acting Captain of the USS Jaresh-Inyo.
